Mathematical Biosciences

an international journal

Volume 131

S. Mukherjee, B. N. Bhattacharya (Calcutta, India), and K. K. Singh (Varansi, India)
Distribution of Time of First Birth in Presence of Social Customs Regulating Physical Separation and Coital Frequency 1

Louis Hoofd, Cees Bos, and Thom Oostendorp (Nijmegen, The Netherlands)
The Effect of Blood Flow on Oxygen Extraction Pressures Calculated in a Model of Pointlike Erythrocyte Sources for Rat Heart 23

Linda J. S. Allen and Phyllis J. Cormier (Lubbock, Texas)
Environmentally Driven Epizootics 51

Niels G. Becker and Vladimir Rouderfer (Bundoora, Australia)
Simultaneous Control of Measles and Rubella by Multidose Vaccination Schedules 81

Martin H. Bender (Salina, Kansas)
A Counterintuitive Result in Bell's Model of Delayed Maturity 103

Peter F. Stadler (Vienna, Austria and Santa Fe, New Mexico) and Peter Schuster (Vienna, Austria; Santa Fe, New Mexico; and Jena, Germany
Permanence of Sparse Catalytic Networks 111

D. Koh, J. Wei, and J. Wu (North York, Ontario, Canada)
Spatially Heterogeneous Discrete Waves in Predator-Prey Communities over a Patchy Environment 135

G. Mertz and R. A. Myers (St. John's, Newfoundland, Canada)
An Augmented Clark Model for Stability of Populations 157

Zdeněk Pospíšil (Brno, Czech Republic)
Remark on the Dissipativity of an N Prey-One Predator System 173

Josef Denes and Daniel Krewski (Ottawa, Ontario, Canada)
An Exact Representation for the Generating Function for the Moolgavkar-Venzon-Knudson Two-Stage Model of Carcinogenesis with Stochastic Stem Cell Growth 185

Carlos L. Schat, Marcelo N. Kuperman, and Horacio S. Wio (Río Negro, Argentina)
An Exact Analytical Solution of a Three-Component Model for Competitive Coexistence 205
